UCRM Customs Import CRM User Manual

Internal Training Document

Version: English

Updated: November 6, 2026

Applies to: All sales staff

1. Login and Logout

Open the system URL and enter your assigned username and password to sign in. On first login, check the language selector in the top right corner. The system supports Traditional Chinese, Simplified Chinese, and English — switch anytime and all menus update instantly.

After logging in, you will see the UCRM logo on the top left, the navigation menu on the left, and your avatar and name on the top right. Next to your name is a bell icon with a red badge showing unread notifications. Click it to see who made what changes, which customer statuses updated, and which new emails need attention. Use "Mark all as read" to clear the badge.

Click "Logout" in the top right to leave the system. Your profile appears at the bottom of the sidebar — click your avatar to switch accounts. The "System Refresh" button at the very bottom reloads all data from the server whenever you suspect the screen is showing stale information.

> **Why refresh:** Data updates automatically, but network delays or concurrent edits by teammates can leave you looking at outdated numbers. A quick refresh ensures you are working from the latest state.

2. Time Zone Switching

The top of the sidebar lists five U.S. cities: Beijing, Seattle, Denver, Chicago, and New York. Each shows the current local date. Click any city to switch the entire system to that time zone. This matters because the U.S. spans multiple time zones — an email received in New York may have a different date than one received in Los Angeles. The system rolls over the business day at 5:00 AM Beijing time, ensuring all U.S. daytime activity falls under one working day.

> **Why time zones matter:** Our customers and brokers are all in the U.S. If we track dates using China time, we will constantly confuse "today" on each side of the Pacific. Switching to

> the customer's local city ensures follow-up dates and deadlines are accurate.

3. Dashboard

The Dashboard is the first page you see after login. It should be your starting point every morning, summarizing everything important on one screen.

3.1 Top Stat Cards

Four large number cards sit at the top. The first shows closed deals: how many customers have a bond issued, out of your total assigned customers. The second shows unread emails. The third shows how many customers have new incoming messages needing a reply. The fourth shows how many emails are currently waiting on your response.

3.2 Outreach Funnel

Below the cards is the outreach funnel — nine boxes arranged left to right showing the customer journey from first contact to bond issued. Each box shows how many customers are currently in that stage. The stages are: New Lead, Collecting Info, Form Pending, Awaiting Reply, Under Review, Docs Needed, Quoted, Paid, and Bond Issued.

The funnel tells you where deals are stuck. If "New Lead" is high but "Form Pending" is zero, many customers have not started the application process and need pushing.

3.3 Active Status Breakdown

Below the funnel on the left is a donut chart showing total customers in the center, with each color segment representing a customer status. The legend on the right maps each color to its label. Use this to quickly see which status has the most customers and where your attention is needed most.

3.4 Recent To-Do Items

To the right of the donut is the to-do list. Each entry shows the customer name, what action is needed, and how long it has been waiting. Todos are auto-generated from email content and

customer status changes. Process them top to bottom — the top ones have been waiting longest and have highest priority.

3.5 Longest No-Follow-Up Top 10

Below the donut are the ten customers with the longest gap since last follow-up. Each shows the customer name, avatar, a summary of the last activity, and a red hour count. Any customer over 72 hours without action should be proactively followed up.

4. Customer Management

Customer Management is your most frequently used page. It lists all customers within your permission scope. As a sales rep, you see only customers assigned to you and those belonging to your subordinates. As a supervisor, you see the whole team.

Use the search bar at the top to filter by customer number, company name, or owner. Toggle between card view and table view. Click any customer to open their detail page, which has tabs for: basic info (company name, address, EIN, contact details), timeline (every action ever taken on this customer), todos, attached files and photos, and finance and quotes. All actions are automatically logged in the timeline.

> **Why you only see your own customers:** Each rep owns their book of business. This prevents double-contacting the same broker and avoids interfering with teammates' pipelines. Supervisors see subordinate pipelines for coaching and review.

5. Broker Pool

The Broker Pool is the master list of every customs brokerage and surety we have ever contacted. Each record includes company name, contact person, email, priority, and availability status.

"Closed · Reusable" means this broker has successfully issued a bond for us before — prioritize them for new customers. "Used · Lower Priority" means we contacted them but did not close the deal. "Unavailable" means they explicitly declined or the email bounced. When you need a broker for a new customer, start here rather than cold-searching.

6. AI Form Assistant

The AI Assistant analyzes a selected customer's current status and recommends what forms are needed, what documents are missing, and what the next step should be. It can also auto-

generate email reply drafts from incoming broker messages. Always read and edit AI drafts before sending — they are suggestions, not final output.

7. Webmail Login

This opens the web-based email client directly. Use it when the system's auto-sync has not picked up a new message yet, or when you need the full webmail experience — composing, organizing folders, searching old mail.

8. Email Inbox

The Email page is your central triage point for all incoming messages. The red badge on the sidebar shows how many are unprocessed. Filter between "Unprocessed" and "Processed" at the top. Each email shows sender, recipient, subject, and a preview snippet. Open any email to read the full body — use the Translate button for English messages and the AI Summary button for a quick digest. Mark emails as processed once you have replied or handled them.

9. File Center

The File Center stores all customer-uploaded documents and photos in one place. Click an image to preview it in a popup, or click a filename to open it. You can also upload new files here. Every file is tied to its customer, so nothing gets lost in email attachments.

10. Archive Bundles

Archive Bundles let you download a complete data pack for any single customer. Each customer has a card — click "Generate / Download" and the system packages their basic info, file list with cloud links, timeline, todos, and notes into a single JSON file. Use this for case closure or when transferring a customer's records to someone else.

11. Learning Library

The Learning Library contains internal training documents. Click a card to open a full-screen viewer with language toggle buttons (Traditional Chinese, Simplified Chinese, English) at the top. Documents are view-only and cannot be downloaded, keeping training materials internal.

12. Work Notifications

Work Notifications show everything relevant to you: who changed a customer's status, who handled an email on your behalf, which customer has a new todo. It is your personal activity feed — open it to see everything that happened while you were away.

13. System Activity Log

The System Activity Log records every action taken by every user: who logged in when, who changed which customer's status, who uploaded what file. Use this for audit and troubleshooting — if a customer record looks wrong, check the log to see who last edited it.

14. Commission Records

Commission Records show your earnings on every closed deal. Each entry lists the customer, commission amount, split method, and status. If you are a subordinate, you see only your own share, not the manager's cut.

15. Voice Input

Every text input field in the system has a microphone button on its right edge. Click it to start speaking — your words transcribe into the field in real time. Click again to stop. The recognition language follows your current UI language setting. Use Chrome or Edge for best results.

16. Daily Workflow

Each morning, start at the Dashboard and check the four stat cards to gauge today's workload. Then go to the Email Inbox and process unread messages in priority order. Next, work through the to-do list starting with items that have been waiting over two days. Finally, pick two or three stuck customers from the longest-no-follow-up list and send a nudge email. Always mark processed emails as done and check off completed todos so your queue stays clean.
